choose perfection

Embrace the natural new you with Fotona

Discover the transformative power of Fotona laser treatments, where cutting-edge technology combines with new levels of excellence in aesthetics and dermatology. Fotona lasers offer a gentle yet effective solution to a wide range of aesthetic and dermatological concerns, from reducing the appearance of fine lines and wrinkles to body shaping and hair removal.

Designed with patient safety and comfort at the forefront, Fotona's laser treatments ensure natural-looking results and minimal downtime, allowing you to return to your daily routine with naturally beautiful skin. You can count on Fotona's 60-year legacy of combining precision technology with deep care for patients to help you achieve the results you desire.

Fotona facial aesthetic laser treatments

Fotona4D® non-surgical laser face lifting

Fotona4D® is a unique combination of four distinct modes of laser treatment harnessed in concert to combat facial aging. It is a minimally invasive treatment for facial tightening and volumization without injectables. The result is full-thickness contraction of collagen for tighter and younger-looking skin with no downtime.

SmoothEye® skin tightening around the eyes

The SmoothEye® method is aimed to tighten the loose and aging skin of the eyelids and the areas around the eyes in a non-invasive way with little or no downtime. The result is improved skin elasticity, overall structure and volume, with wrinkle reduction around the eyes.

LipLase® fuller lips without injectables

In contrast to injectable fillers, the LipLase® treatment is non-invasive, and there is nothing artificial as patients develop their own collagen in their lips. With LipLase® the characteristics of 'ideal lips' can be achieved such as fullness, volume, correct balance between the upper and lower lips and a well-defined vermilion border.

FracRevive™ **skin tone, sun damage** **and texture improvement**

FracRevive™ is an efficient two-step skin rejuvenation treatment with minimal downtime. The treatment improves the patient's skin tone and texture as well as reduces pore size, pigmentation, and static wrinkles. Improved skin tone and texture can be observed already after just one treatment, while four sessions are recommended for optimal results. Patients report high satisfaction with the procedure and great improvement in skin complexion.

Skin resurfacing for fine lines and wrinkles

With age our cells begin to lose moisture and collagen. Laser treatments such as peels are used to improve and smooth the texture of the skin, remove wrinkles, small scars and pores. During the treatment, the superficial layers of the skin are gently removed in a very precise way to promote regeneration and new collagen growth, resulting in a more youthful look. Recent developments in laser technology are now delivering a longer lasting and scientifically proven method of restoring the natural beauty of the skin.

Fotona laser treatments for body sculpting and skin tightening

TightSculpting® non-surgical fat reduction and skin tightening

TightSculpting® is a unique laser method to address both body fat as well as the surface appearance of the skin. It is intended for superficial as well as deep heating of the skin, with the purpose of reducing localized fat deposition and shaping the body by heating shrinkable connective structures.

TightWave® magnetic body shaping and muscle strengthening

TightWave® is an innovation in non-invasive body shaping and muscle strengthening treatment of different body areas. Magnetic pulses harmlessly penetrate the muscle layers, induce an electrical current in the neurons and make muscles automatically contract. The end result is increased muscle mass and strength.

Other popular laser treatments

Laser hair removal

Unwanted body and facial hair is a common problem for many men and women of all skin types. Laser hair treatments are a safe, effective and convenient way to achieve permanent hair reduction. Fotona's innovative system effectively targets surface treatment areas while leaving the surrounding tissues unaffected. These treatments deliver outstanding results.

HAIRestart® hair growth stimulation

Fotona's HAIRestart® hair growth stimulation is an effective method of treating hair loss disorders. This innovative solution is focused on stimulation dormant hair follicles to promote hair growth. Laser light is delivered to the tissue gently and efficiently, heating the scalp in a safe and controlled way. The overall effect is a gentle pulsed heating of the skin and the production of growth factors.

Laser treatment of active acne and acne scars

Laser treatment reduces **acne inflammation** by heating overactive sebaceous glands, accelerating the healing process and reducing the possibility of developing new acne inflammation.

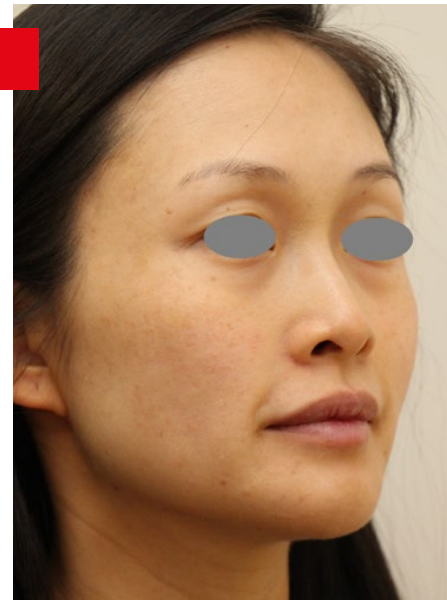

Laser treatment of **acne scars** is based on a precise and gentle skin resurfacing procedure, where the laser is absorbed by the top micro-layers of the skin to vaporize scarred skin and stimulate the production of new collagen in the dermis.

Pigmented and benign lesions removal

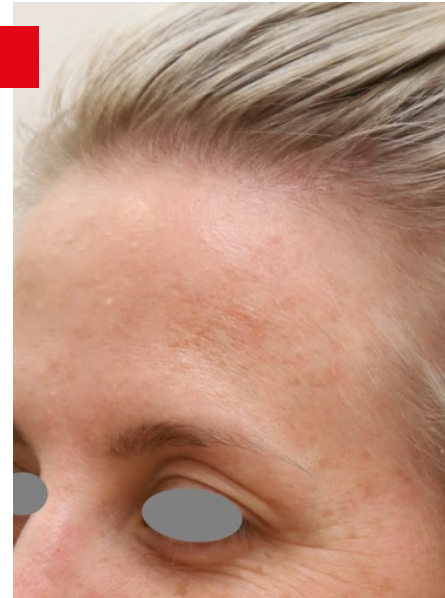

Lasers are a simple, fast, effective and safe tool for removing a wide variety of benign pigmented lesions, such as freckles, age spots, birthmarks, moles, certain vascular lesions, melasma, and seborrheic and actinic keratoses. Laser removal of pigmented lesions works by selectively destroying the pigment in the skin, without the need for excision.

ClearSteps™ treatment of nail fungus and treatment of warts

Fotona offers a patient-friendly method for treating toenail fungus. ClearSteps™ is a simple and effective procedure that uses the power of laser light to heat evenly throughout the depth of the effected nail and skin tissue, effectively weakening and killing the parasitic fungi that have infected the patient's nails. Warts are also destroyed with laser heat.

ComfortLase® wound healing and pain reduction

ComfortLase® utilizes low-level, visible-red to near-infrared light energy, which stimulates cells to naturally heal, relieve pain and reduce inflammation. Additionally, the process results in accelerated tissue regeneration, stimulation of cell metabolism, increased lymphatic flow and stimulation of micro-circulation.
