

HAIR V GO/ALKALINE WASH AFTERCARE ADVICE

Hair removal with this treatment may not be permanent.

This treatment does not affect the growth rate or shock the hair into delaying growth rate as in the case of waxing.

This treatment has the added benefit of exfoliation as well as hair removal at the same time. Therefore it is advised to not use abrasive products and/or exfoliants for two weeks before and after the treatment.

This treatment professional hair removal treatments will weaken my excess hair, not encourage more growth or coarsen my hair.

Only the Hair V Go/alkaline wash products provided by the technician during the treatment series are safe on your skin for 48 hours after treatment.

Some people may experience redness and a slight sandpaper effect on the skin or a slight tingling or "sunburn" sensation. If this occurs do not use irritants, scrub or pick your skin as this can cause scarring or pigmentation especially with darker skin tones.
