

## I ECOONLINE

De Moura Lawson has worked with EcoOnline since late 2018 to bring about the required health and safety awareness that its products can introduce to the market. This was performed in a number of ways such as:

- Delivery of Bespoke Instructor Led programs across numerous cities around the United Kingdom such as Manchester, Newcastle, Bristol, Liverpool, London, Birmingham and many more.
- Production of various webinars on topics such as Leading and Lagging Safety Indicators, Behavioral Based Safety Programs and Contractor HSE Management.

### METHODOLOGY

Demoura Lawson Consulting analysed the various aspects of two of the software programs developed by EcoOnline (Chemical Manager and Safety Manager) and looked at how elements within the safety data management systems could better influence overall health and safety and cultural change within an organisation.

### OUTCOMES

The training programs as well as the webinar have been hugely popular and have drastically increased the number of software uses internationally.
