ABOUT US

WHO WE ARE

The need for qualified arborists, consultants and applicators is rising. With more awareness related to tree risk, pests, and disease, comes the need for custom-tailored maintenance solutions.

Serrano Arboriculture offers tree-related services and expertise based on the ever-evolving standards and practices outlined by the state and arboriculture industry (DPR, ISA & ASCA).

"I am committed to working with you by providing sustainable and ethical options that will help you identify your trees needs and establish a plan that improves the health of your trees while meeting your goals."

-Erick Serrano

COMPANY SERVICES

PLANT HEALTH CARE

Pests and disease targeting trees vary from season, region to decade and because of this, treatment is oftentimes reactive and evolving as our industry learns more.

We are qualified to treat common pests like Shot Hole Borer, Pine Bark Beetle, and nutrient deficiencies like Scale Root Rot. Treatment plans are custom and vary based on need and options available.

GPS TREE INVENTORY

A detailed collection of data associated to each tree will help identify and outline needs. Understanding not only the quantity of trees, but the species, size and health are all factors that can help determine long-term management plans, pruning schedules and budgeting allocations.

INTEGRATED PEST MANAGEMENT

We perform pest control with an ecosystem-based strategy that focuses on long-term prevention. Our holistic approach to disease and infestations is with treatment and different techniques like biological control, habitat manipulation or by modifying traditional practices— all while minimizing any health risk to our environment and community.

TREE RISK ASSESSMENT

Understanding risk and probability are key factors in determining mitigation options. Risk is categorized and ranked from low, moderate, high, and extreme to determine the best maintenance plan and/or treatment options.

TREE INSTALLATION

From smaller, 15-gallon trees to large 10-foot box specimen trees, our professional installation practices are performed expertly, supporting the chance of survival.

Unsure of the best species for your planting needs? We'll help provide species recommendations based on parkway size, soil type, and other criteria.

TREE PRESERVATION

You may be a Developer or Homeowner looking to build or add-on to your property where trees may be present. Whether tree preservation is deemed necessary out of compliance (or desire), we can assist you with protection plans, monitoring and reporting during the construction phase and beyond.

OUR VALUED CLIENTS

At Serrano Arboriculture we take pride in being a trusted service-provider and consultant for both commercial and residential properties. Our clients include:

- Commercial Developers
- Estate Managers
- Golf Courses
- Home Builders
- Homeowners
- Multi-family Housing
- Public Agencies & Municipalities
- Real Estate Agents
- Residential Communities
- Resorts & Hotels
- School Districts and Colleges

Shot hole borer infestations can be controlled with tree injections and proper monitoring.
