

PROTECT YOUR STAFF AND STUDENTS

Volan's groundbreaking software provides fully private, real-time and historical data. It's a multi-functional solution for emergency response and COVID-19 mitigation in schools.

The Volan dashboard (above) provides immediate contact tracing results as well as information where an infected case has been on school property.

KEY FEATURES & BENEFITS

Contact Tracing

When a confirmed case is reported, you can run a precise trace across thousands of people within seconds. Rank those *most* exposed using the most recent CDC guidelines. Avoid mass quarantines and eliminate costly manual tracing.

Emergency Readiness

Initiate an emergency alert from anywhere within your facility. Volan provides 3D, real-time information on the location of the incident, what the incident is, who is reporting it and who is within the risk perimeter.

Attendance & Rostering

Free up valuable instruction time with automatic attendance and rostering. Includes current and historical data on who is on-site, when and where, arrival and departure times. Quickly locate students or faculty.

Fully Private

- No Personally Identifiable Information (PII) stored on sensors
- No location positioning offsite
- PII is stored under AES-256 Encryption
- Only authorized users have access to student details
- Random numbers are assigned for location, sensors and sites
- Volan will never have access to PII data

ESSER Funds Can Pay for Volan

All ESSER funds can be used for projects related to preventing, preparing for and responding to COVID-19 including:

- Contact tracing
- Personal protective equipment
- Cleaning materials
