Elevate Your Coding Performance

Our client, an Academic Medical Center in the Midwest, aimed to reduce the Uncoded Days metric to below 1.3 days across inpatient, outpatient, and professional coding categories.

SOLUTIONS

To address these issues, a multi-pronged approach was used:

- **Daily Metrics Management:** J2 introduced mechanisms to track and monitor coding performance on a daily basis.
- **Leader Accountability** Managers were engaged and held responsible for tracking progress and managing team performance.
- **Monitoring and Baseline Establishment:** Initial monitoring was conducted to establish a baseline for comparison, setting clear performance expectations.
- **Workload Distribution:** Managers worked with their teams to ensure there was a balanced distribution of coding workloads.
- **Productivity & Quality:** Maintained a focus on both productivity and quality to ensure compliance by consistently monitoring and measuring performance for both.

At J2 Integrity Solutions, we don't settle for the status quo; we partner with teams to drive measurable improvements in operational performance while not compromising quality.
