- Taking immune suppressants

*Medical clearances must be on physicians letter head with clients full name, provided prior to the start of any micropigmentation procedure. We CANNOT make exceptions to this policy. Failure to comply will result in the appointment being rescheduled and the client being charged a cancelation fee of 50% of the total appointment cost.*

## appointment prep instructions

Please avoid the following before your appointment:

### **2 months prior:**

no fillers.

### **2 weeks prior:**

No retin-A, vitamin c, glycolic acid and retinal products on or near the area we will be working on for 2 weeks prior and indefinitely after your procedure. No chemical peels, or Botox in the last 14 days.

### **72 hours before your appointment:**

No alcohol, ibuprofen, aleve, naproxen, or aspirin.

### **Day of procedure:**

No caffeine the day of procedure

If you have herpes simplex and get cold sores or fever blisters and would like to have your lips done you need to take a prescription for anti viral provided by your dr 3 days before and 3 days after your lip procedure to avoid an outbreak.

Pre screening helps determine if you are an appropriate candidate for micropigmentation. Our clients health and welfare is our top priority. The person who knows the clients medical history the best is the client themselves, therefore it is the clients sole responsibility to disclose any and all medical conditions to their practitioner which may impact their health and safety, or the results of the procedure.

Many women are more sensitive during their menstrual cycle, please consider this when scheduling any micropigmentation procedure.

If you would like a patch test to determine if you are allergic to our pigments, please contact us as soon as possible so we can take care of this a minimum of 3 days prior to your scheduled procedure date.
