

### Sessions At Home safety

- \* First Day Photo photographers are trained in infection control due to their usual work in the hospital.
- \* The morning of your session, our scheduling coordinator will text you to confirm that you are healthy. *Please reply*. If we don't receive a reply, your session will have to be rescheduled. Your photographer will also be responding to the same symptom checklist and will record his/her temperature before coming to your home.
- \* Your photographer will arrive in a mask, and will wear clean gloves during your session. All camera equipment is sanitized.
- \* You will do most of the moving of your baby, under the expert guidance of your photographer. Your photographer may make minor adjustments with your permission using a clean, gloved hand.
- \* Please wear a mask when you are not being photographed. You may remove it for frames you participate in with your baby.
