ABOUT THE COLLECTION

Nina Lichtenstein and Accurate's collaboration reimagines essential safety hardware as unexpected canvases, embedding the stress-reducing power of nature directly into the door's surface so that each touch becomes a moment of connection and healing while still upholding safety. The three collections, etched in bright white on satin stainless steel, visually shifts in tone with changing light, producing a dynamic, evolving architectural detail that interacts with its surroundings over the course of the day.

BIRCH FOREST

Birch Forest translates the vertical rhythm of a woodland grove into a refined architectural detail. Etched, slender tree forms create depth and texture that shift subtly with changing light. The composition is structured yet organic, bringing a sense of order and quiet warmth to healthcare spaces.

COASTAL CALM

Coastal Calm draws from the horizon line of sea and sky. Etched waves, drifting clouds, and distant birds are composed in balanced relief across the surface. As light moves across the hardware, the tonal variations enhance the sense of dimension and movement within the design.

NIGHT SKY

Night Sky features a crescent moon, stars, and softly layered clouds, allowing for a visually dynamic result while maintaining a quiet presence. The vertical format emphasizes negative space, allowing the celestial elements to feel deliberate and composed rather than solely ornamental.
