

SurgiLux™

Perfect Surgical Illumination

Delicate surgical procedures require extreme precision and exquisite illumination to deliver the best possible patient outcomes. Current surgical lighting systems are expensive, require constant manipulation, put surgeon ergonomics at risk, and fail to illuminate deep surgical pockets, forcing surgeons to operate in precarious shadows. SurgiLux™ empowers any surgeon to inexpensively, precisely, and powerfully illuminate their surgical targets by simply attaching to any commercial electrocautery along with a wide array of surgical instrumentation.

Cordless and sterile

No risk of skin burns

Over 50% brighter than competitors

Provides 70 minutes of continuous illumination

No capital equipment required

Minimizes adjustment of OR lighting/headlamps

Virtually weightless

Ordering Catalog Number SL-12

"Operating in and around deep tissue structures without perfect illumination can be incredibly risky for both patients and surgeons. SurgiLux™ helps me clearly see and differentiate critical anatomy where traditional lighting falls short, ensuring the best possible surgical outcomes... I won't operate without it."

Bradley Trinidad, MD - Vascular Surgeon

"SurgiLux™ enables me to be more confident than ever operating in deep delicate anatomy where complete illumination of the surgical field is critical but rare. It enables effective lighting without compromising my neck comfort and spine health. This simple yet elegant technology allows me to see better, thereby improving patient safety, while providing significant economic advantages to my institution as compared with other lighted dissection instruments. I fully recommend SurgiLux™!"

Daniel J. Curry, MD - Pediatric Neurosurgeon
