360° photography and custom programming of a virtual walk-through, capturing sites and showing current condition with easy navigation of spaces. Resolution of images at 35000 x 17000 pixels. The user gains spatial awareness of the building or site prior to an in person visit. Before and after tour comparisons can showcase different stages of a project. Custom menu creation will connect multiple buildings in a facility. Additionally, embedded content can be added including: photos, video, PDF files, floor plans, wayfinding, photogrammetry, and more. All tours are compatible with desktop, mobile and virtual reality devices. ADA compliant tools allow all users access to utilize the tour. Tours are publicly accessible in AWS East, and GovCloud or deliverable for hosting on company servers, software is open source.
