Precise People Positioning

## PROTECT YOUR PEOPLE

We created software that provides fully private, historical, and real-time data, giving you a multi-functional solution for safeguarding your staff while also ensuring a pandemic won't blindsides your business ever again.

## KEY FEATURES & BENEFITS

### Emergency Readiness

Emergency alert can be initiated from anywhere on campus. Volan provides 3D, real-time information on the location of the incident, what the incident is, who is reporting it and who is within the risk perimeter.

### Contact Tracing

When a confirmed case is reported, a precise trace across thousands of people can be run within seconds. By ranking those *most* exposed using the most recent CDC guidelines, mass quarantines and costly manual tracing and eliminated.

Above: The Volan dashboard provides precise real-time data for first responders & historical data to mitigate future virus risks. Right: The lightweight wearable sensor.

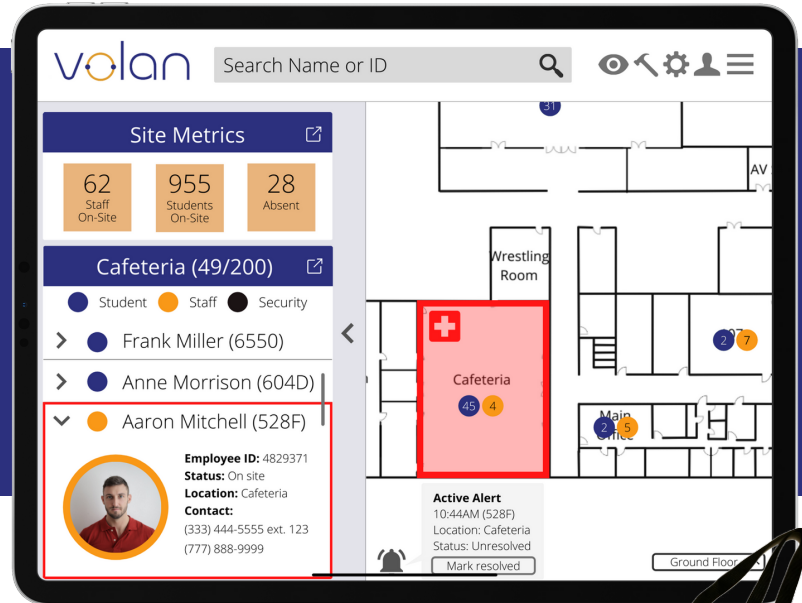

### Operational Optimization

Get access to fully encrypted data and analytics to streamline productivity, optimize labor allocations and reduce costs.

## FULLY PRIVATE

- No Personally Identifiable Information (PII) stored on sensors
- No location positioning offsite
- PII is stored under AES-256 Encryption
- Only authorized users have access to attendee details
- Random numbers are assigned for location, sensors and sites
- Volan will never have access to PII data

For information & to schedule a demo, please contact:

## Easy Installation

Mesh network sensors are installed to create geofenced zones. Rooms of all sizes are geofenced within minutes with small, unobtrusive Volan Shields. Technology training is simple and fast.
