PARAMEDICAL & COSMETIC TATTOOING

## Pre-Service Instructions

Before any tattooing service:

Abstain from alcohol 24 hours prior to your service.

Abstain from coffee 24 hours prior to your service.

3 days prior: Discontinue fish oil, vitamin E, coumadin, ibuprofen, aspirin, niacin, or other blood thinners with doctor's permission.

Before Eyeliner or Lash Line Enhancement:

Absolutely no lash growth serum within the 30 days prior to your cosmetic tattooing procedure. The use of lash growth serum within the 30 days before your treatment can cause pigment to migrate outside of the desired area.

\*No eyeliner tattoo can be performed if a client has lash extensions. Please remove the lash extensions before your appointment and wait 3 weeks after your appointment to have them reapplied.

Please remove contacts prior to eyeliner service and bring glasses. Wait 48hrs after to wear contacts.

Botox/Fillers:

Wait 30 days after your Botox or fillers to get your cosmetic tattooing performed. This gives time for you to heal and settle. Additionally, wait 30 days after your tattooing to get fillers and botox in order to let the tattoo heal.

Health Concerns:

If you are diabetic or under the ongoing care of a physician, you must obtain and provide written permission from your physician in order to have your cosmetic and/or paramedical tattoo performed. This can be sent via email or a copy can be given prior to your appointment. No person pregnant or nursing should undergo tattooing.
