

Precise People Positioning Software

# REBUILD ATTENDEE CONFIDENCE

We created software that provides fully private, historical, and real-time data, giving you a multi-functional solution for safely holding in-person meetings

The Volan dashboard (above) provides precise historical data so you can swiftly identify those most at risk

## KEY FEATURES & BENEFITS

### Contact Tracing

When a confirmed case is reported, run a precise trace across thousands of people within seconds and rank those most exposed using the most recent CDC guidelines. Avoid mass quarantines and eliminate inaccurate manual tracing.

### Social Distancing

Receive automatic notifications when zones exceed capacity and easily keep social distancing guidelines in place.

### Beneficial Analytics

Get access to fully encrypted data and analytics on attendee movements for meeting analysis, vendor leads and improvement to future meetings

### Fully Private

- No Personally Identifiable Information (PII) stored on sensors
- No location positioning offsite
- PII is stored under AES-256 Encryption
- Only authorized users have access to attendee details
- Random numbers are assigned for location, sensors and sites
- Volan will never have access to PII data

### Easy Installation

Rooms of all sizes are geofenced in minutes with small, unobtrusive Volan Shields.

No new technology to learn-- a Volan team member is always onsite managing the process and monitoring the dashboard.
