

All Magra products are made of a non-combustible concrete mixture, finished with water-based products. It is necessary to use these water-based products to maintain the non-combustible rating for your handcrafted design.

### **Cleaning your MagraHearth Product**

- Dry dusting is our recommended cleaning method, but vacuuming or a compressed air duster can be used.
- Use only a non-abrasive soft cloth.
- A moist cloth can be used if the water is squeezed out.
- Do Not Scrub! Scrubbing will remove the seal coat and you will be directly affecting the stained surface of the mantel. The color can rub right off.
- Do Not Use
  - Abrasives
  - Cleaners
  - Goof Off
  - Paint remover/thinning products
  - Other chemicals

### **Protecting your MagraHearth Mantel/Hearth Products**

It is always recommended to cover your mantel/hearth products during any construction, remodeling, painting, stonework, etc. to prevent any accidental damage such as chips, drywall dust, and mortar or paint spills.

1. Use the cardboard box your mantel came in and cut strips to cover and/or wrap around your mantel.
2. Do not use tape directly on the mantel. Some tape can leave a residue and remove the mantel finish. This includes common blue painter's tape.

### **Touch Up Kits/Repair Kits Available**

If you do remove stain from the mantel or have areas of paint loss, you can replace it with the stain included with your product or order a small repair kit through a MagraHearth dealer.

### **Maintenance of your MagraHearth products**

Reapplication of a water-based sealant to MagraHearth products is recommended if there is prolonged sun exposure or if the mantel looks "dull". The indoor sealant can revive the color of your MagraHearth product and can be ordered through a MagraHearth Dealer.
