NOTES:

- Low Carbon Steel as hot rolled, pickled, and slightly oiled with an ultimate strength of 42,000 to 45,000 PSI Similar to SAE 1005—SAE 1010.
- Electrode Material is RWMA Class 2.
- Surface of steel is lightly oiled but free from grease, scale or dirt.
- Minimum weld spacing is that distance for which no increase in welding current is necessary to compensate for the shunted current effect in adjacent welds.
- Radius Face electrodes may be used:  
0.010 to 0.031 — 2" Radius  
0.031 to 0.078 — 3" Radius  
0.078 to 0.125 — 4" Radius
- 
- Weld time is indicated in cycles of 60 cycle frequency.
- Tensile shear strength values are based on recommended test sample sizes:  
Direction of Force      Thickness      Width      Length  
.000" to .029"      5/8"      3"  
.030" to .058"      1"      4"  
.059" to .115"      1-1/2"      5"  
.116" to .190"      2"      6"
- Tolerance for machining of electrode diameter "d" is ±.015" of specified dimension.
- Electrode force does not provide for force to press ill-fitting parts together.
