

## CUT

Easily cut Auragami at the job site to perfectly fit your application.

## FOLD

Fold vertically, horizontally, or diagonally to seamlessly light multiple planes.

## CONNECT

Conveniently spaced wire terminals allow for flexible power connections.

## FAST & EASY INSTALLATIONS

Auragami LED Light Sheets offer the most customizable and precise configuration options of all light sheets available in the market today. The field-friendly cutting of the LED light sheets allows users to cut vertically, horizontally, and diagonally.

## PLUG & PLAY

Easily connect up to eight LED light sheets using the included sheet-to-sheet connectors. These connectors follow Class 2 guidelines while meeting UL requirements. Included domed protective bumpers are specifically engineered and tested to support up to 400 pounds per bumper.

For simple mounting, the sheets feature industrial 3M adhesive on the back. Simply peel and stick directly against drywall, plywood, metal, or any other suitable mounting substrate. You may also puncture the light sheets where marked using screws, nails or even push-pins to secure the sheets in place without affecting illumination. Mechanical fastening is recommended in addition to the adhesive back.
