

# EMFACE: Long-Term Efficacy

## Evaluation of Synchronized RF and HIFES Efficacy

### One Year Post-Treatment: Case Study

Yael Halaas, M.D., FACS<sup>1</sup>

1. Yael Halaas, MD, New York, NY, USA

Presented at the American Society for Laser Medicine and Surgery (ASLMS), Baltimore, Maryland, April 11, 2024

## Highlights

- Three subjects (skin types II-IV) were evaluated one year after their original series of four 20-minute EMFACE treatments (forehead and cheeks)
- Evaluations were conducted using a 3D camera at 3 months and 1 year post-treatment
- All three subjects demonstrated sustained improvement in the zygomatic area and jowl contour in the mandibular region at the 1-year follow-up compared to baseline
- The patients did not receive any additional treatments

## Demonstrating EMFACE's Long-Term Efficacy Through Average Volume Changes (n=3)

Treatment Area	3-Month Follow-Up	1-Year Follow-Up
Zygomatic area*	+3.8 ml	+2.6 ml
Mandibular area*	-4.0 ml	-2.7 ml

## Subjects Maintained Positive Volume Shift in Upper Cheeks One Year Post-Treatment

\*Volume changes represent averages for both sides combined.
