

You can learn a lot building a special school for very special kids.

Green Tree School shared with us their mission of creating a visionary new facility to unify their student body of children with unique challenges and abilities in one building and to expand their outreach to communities, schools and homes. From that day to this, it has been our singular purpose to transform a rocky site into a landmark campus with a groundbreaking 60,000 square foot school and center. And to help Green Tree School achieve its vision of "Transforming Lives • Impacting Communities."

- An Approved Private School provides academic, social skills, life skills and vocational education to special students ages 5 to 21
- Behavioral Health Services help stabilize and empower children with severe emotional and behavioral learning needs
- A unique On-Site Outpatient Clinic ensures integrated mental health care within the school setting
- An Integrated Services Innovation & Training wing has been designed to encourage research opportunities to share best practices with partners in the community
- Green Tree Partnerships, an education consulting cooperative, specializes in training, and programmatic resources to assist schools in building their capacity to work with their own special needs children
